

[Medical Letterhead]

[Date: September 20, 2023]

To Whom It May Concern,

I am writing to provide an attending physician statement for Mr. John Smith, a 58-year-old male patient under my care at San Antonio Medical Center, where I serve as the Chief Cardiologist.

Mr. Smith was admitted to our facility on September 18<sup>th</sup> with a known history of coronary artery disease (CAD) and congestive heart failure (CHF). During his hospitalization, he presented with worsening chest pain, shortness of breath, and palpitations. Comprehensive diagnostic evaluations, including echocardiography, cardiac catheterization, and laboratory studies, confirmed severe coronary artery disease with impaired left ventricular function.

I have been managing Mr. Smith's complex cardiovascular condition, which includes prescribing appropriate medications to control his symptoms, providing dietary guidance to manage his fluid intake, and coordinating closely with our multidisciplinary team to optimize his care.

Based on the current clinical assessment and response to treatment, Mr. Smith's condition remains stable. We are closely monitoring his progress and adjusting his treatment plan as needed to ensure the best possible outcomes. Mr. Smith is also actively engaged in cardiac rehabilitation and adhering to his medication regimen.

I believe that Mr. Smith's prognosis is guarded but hopeful with ongoing medical management and lifestyle modifications. Further interventions, such as revascularization procedures, may be considered in the future based on his clinical response.

Please feel free to contact me at [Your Contact Information] if you require additional information or have any questions regarding Mr. Smith's medical condition.

Sincerely,

JD. MD, San Antonio Medical Center, 123-456-7890
